

## Business Inflation Expectations Survey (BIES)<sup>1</sup> – February 2018

### A. Inflation expectations

- One year ahead business inflation expectation in February 2018, as estimated from the mean probability distribution of unit cost increase, is placed at 3.85%, showing a marginal increase from 3.79% observed in January 2018. Trajectory of one year ahead business inflation expectation is presented in Chart 1.
- Uncertainty of business inflation expectations in February 2018, as captured by the square root of the average variance of the individual mean probability distributions, is estimated to be 1.98% (almost remained same as observed in January 2018).

**Chart 1: One year ahead business inflation expectations (%)**

- Respondents were also asked to project one year ahead headline CPI inflation through an additional question using a probability distribution. This question is being repeated now in every alternate month.
- Results indicate that businesses in February 2018 expect one year ahead CPI inflation to be 4.1%, with a relatively low standard deviation of 1.0% (Chart 2).

<sup>1</sup> The Business Inflation Expectations Survey (BIES) provides ways to examine the amount of slack in the economy by polling a panel of business leaders about their inflation expectations in the short and medium term. This monthly survey asks questions about year-ahead cost expectations and the factors influencing price changes, such as profit, sales levels, etc. The survey is unique in that it goes straight to businesses, the price setters, rather than to consumers or households, to understand their expectations of the price level changes. One major advantage of BIES is that one can get a probabilistic assessment of inflation expectations and thus can get a measure of uncertainty. It also provides an indirect assessment of overall demand condition of the economy. Results of this Survey are, therefore, useful in understanding the inflation expectations of business and complement other macro data required for policy making. Towards this objective, IIMA introduced the BIES from May 2017. The questionnaire of BIES is finalized based on the detailed feedback received from the industry, academicians and policy makers. A copy of the questionnaire is enclosed for information.

Companies, mostly in the manufacturing sector, are selected based on certain sampling criteria from the list of companies as available with the Ministry of Corporate Affairs (MCA). BIES - February 2018 is the 10<sup>th</sup> round of the Survey. These results are based on the responses of 1804 companies.

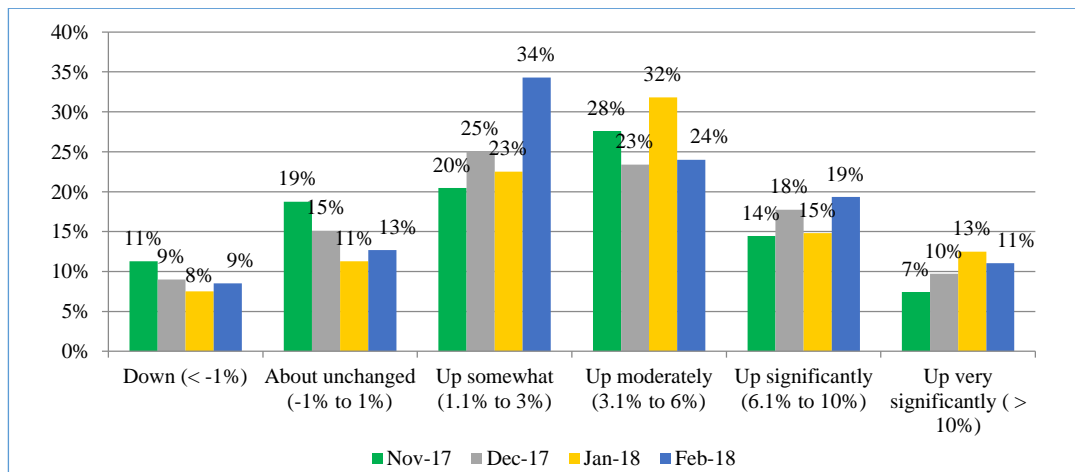

**Chart 2: Expected headline CPI inflation (one year ahead) - mean probability (%) distribution**

### B. Costs

- Regarding cost perceptions, around 54% of the firms in February 2018 reported that increase in costs has been more than 3% during the last one year (Chart 3). This proportion has declined in February 2018.
- The cost perception data in February 2018 does not indicate significant increase in costs.

**Chart 3: How do current costs per unit compare with this time last year? – % responses**

### C. Sales Levels

- Around 30% of the firms in the sample reported that sales are ‘much less than normal’<sup>2</sup> in February 2018 (Chart 4). This proportion has been quite stable during last 4 consecutive months.

<sup>2</sup> "Normal" means as compared to the average level obtained in the preceding 3 years.

- Over half of the firms in the sample continue to report that sales levels are much or somewhat less than normal. Overall data shows persistence of the pessimism about the demand conditions.

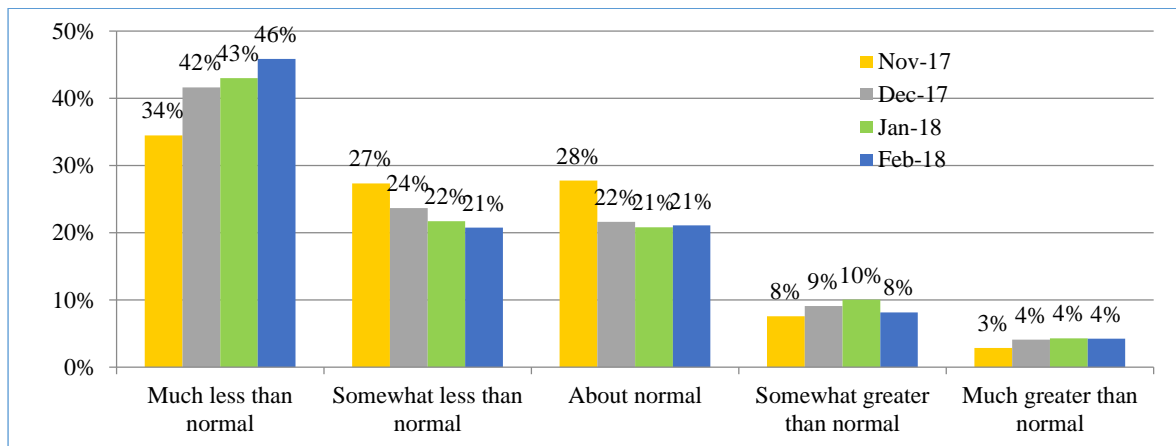

**Chart 4: Sales Levels - % response**

#### D. Profit Margins

- Responses of around 46% of the firms in the sample in February 2018 indicate ‘much less than normal’<sup>3</sup> profit margin (Chart 5). This is showing an increasing trend during last 4 consecutive months.
- Over 65% of firms continue to report squeezing of profit margins. This proportion has remained more or less stable during last 4 months.
- Perception of higher profit margins in the current economic conditions is not supported by the data.

**Chart 5: Profit Margins - % response**

<sup>3</sup> "Normal" means as compared to the average level obtained in the preceding 3 years.

## Business Inflation Expectation Survey (BIES) – Questionnaire

### A. Current Business Conditions

Q1. How do your current **PROFIT MARGINS**<sup>@</sup> compare with "normal"<sup>\*</sup> times?

- Much less than normal
- Somewhat less than normal
- About normal
- Somewhat greater than normal
- Much greater than normal

Q2. How do your current sales levels compare with **SALES LEVELS**<sup>@</sup> during what you consider to be "normal"<sup>\*</sup> times?

- Much less than normal
- Somewhat less than normal
- About normal
- somewhat greater than normal
- Much greater than normal

<sup>@</sup> of the main or most important product in terms of sales.

<sup>\*</sup>"normal" means the average level obtained during the corresponding time point of preceding 3 years.

### B. Current Costs Per Unit<sup>^</sup>

Q3. Looking back, how do your current **COSTS PER UNIT**<sup>^</sup> compare with this time last year?

- Down (< -1%)
- About unchanged (-1% to 1%)
- Up somewhat (1.1% to 3%)
- Up moderately (3.1% to 6%)
- Up significantly (6.1% to 10%)
- Up very significantly (> 10%)
- 

<sup>^</sup> of the main or most important product in terms of sales.

### C. Forward Looking Costs Per Unit<sup>\$</sup>

Q4. Projecting ahead, to the best of your ability, please assign a percent likelihood (probability) to the following changes to costs per unit<sup>\$</sup> over the next 12 months.

- Unit costs down (less than -1%)
- Unit costs about unchanged (-1% to 1%)
- Unit costs up somewhat (1.1% to 3%)
- Unit costs up moderately (3.1% to 6%)
- Unit costs up significantly (6.1% to 10%)
- Unit costs up very significantly (>10%)
