

#### About the Editors

**Vijay Paul Sharma** is a Professor in Centre for Management in Agriculture, Indian Institute of Management, Ahmedabad, India. He has wide ranging research, teaching and consulting interests in the areas of agri-food policy, commodity markets, international trade including the WTO, subsidy issues, food retailing, agribusiness competitiveness, food safety and quality issues.

**Bill Vorley** has a background in ecology, and trained in the farm fields of southern England and SE Asia. He is Principal Researcher, Sustainable Markets Group and Team Leader, Market Governance and Business Models in International Institute for Environment and Development, London. He has coordinated the Rejuvenating Markets programme.

**Jikun Huang** is Director of the Center for Chinese Agricultural Policy (CCAP) at the Chinese Academy of Sciences in Beijing. His research interests are in the areas of agricultural and rural development, R&D policy, consumption, price and marketing, policy applied econometrics and statistics, agricultural resource and environmental economics.

**Abid Qaiyum Suleri** is Executive Director, Sustainable Development Policy Institute (SDPI), Islamabad, Pakistan's premier policy think-tank. Prior to joining SDPI, he served as Head of CNFAM GB Pakistan Program. He has conducted intensive research on food insecurity, regional trade and globalization and rural livelihoods.

**Larry N. Digal** is a Professor in the School of Management of the University of the Philippines and teaches managerial economics, agricultural price and policy analysis, strategic management and quantitative economics. He served as Dean of the School of Management from 2004 to 2007.

**Thomas A. Reardon** is Professor in the Department of Agricultural, Food, and Resource Economics at Michigan State University, USA. His research work is mainly in India, China, Indonesia, and Nicaragua, including studies of the rise of supermarkets, the transformation of value chains and emergence of rural business hubs and other linkages between farmers and the modern food industry.

#### About the Book

Although agriculture is no longer a major contributor to national GDP in many Asian countries but poverty levels are still high. It is well established that agriculture plays a major role in poverty reduction. But it requires improvement in skills and asset position of agricultural producers, mainly smallholder producers and linking them to dynamic agri-food markets. Rapid changes are taking place in developing countries and emerging economies, with implications for the ability of agriculture to contribute to economic growth, poverty reduction, and sustainable rural development. Small-scale agriculture, which supports livelihood of most of the rural poor, is perhaps ill-equipped for these changes. Tensions run especially high in Asia where agri-food systems have been undergoing modernization and restructuring.

This book examines the issues and concerns related to modernisation and restructuring of food supply chains through country-based case studies and tries to understand processes and impact of restructuring through a comparative in-depth empirical analysis in China, India, Indonesia, Philippines, Sri Lanka, and Thailand. The papers address important questions such as what restructuring is occurring and what distinct market channels do farmers face and how do they differ? What determines participation of smallholder producers in different supply channels? What is impact of farmers' participation on technology and income? What institutional, technological, economic and other policy reforms are necessary to enhance their effective participation in emerging and restructuring agri-food markets? Experiences and lessons from these case studies are important not only for enabling farmers to participate in modern supply chains, but also for modernizing agriculture and ensuring better supply of safe foods.

It is hoped that insights provided in the book will be useful for policy planners, researchers, developmental organizations and agribusiness community with a keen interest in improving market access of smallholder farmers, thereby supporting smallholder production system.

Linking Smallholder Producers to Modern Agri-Food Chains

EDITORS  
Vijay Paul Sharma • Jikun Huang  
Abid Qaiyum Suleri • Thomas A. Reardon

## Linking Smallholder Producers to Modern Agri-Food Chains

### Case Studies from South Asia, Southeast Asia and China

**Editors**  
Vijay Paul Sharma  
Bill Vorley  
Jikun Huang  
Abid Qaiyum Suleri
