

Business Inflation Expectations Survey (BIES)¹ – August 2026

A. Inflation expectations

- One year ahead business inflation expectation in August 2026, as estimated from the mean of individual probability distribution of unit cost increase, has marginally declined by 10 bps to 4.84%, from 4.94% reported in July 2026. Business inflation expectation remained below 5% for the past 3 consecutive months. The trajectory of one year ahead business inflation expectations of firms is presented in Chart 1.
- The uncertainty of business inflation expectations in August 2026, as captured by the square root of the average variance of the individual probability distribution of unit cost increase, remained elevated at over 2% for the past eight consecutive months.

Chart 1: One year ahead business inflation expectations (%)

- Respondents were also asked to project one year ahead CPI headline inflation through an additional question using a probability distribution. This question is repeated every alternate month, coinciding with the RBI's bi-monthly monetary policy announcement.

¹The Business Inflation Expectations Survey (BIES) provides ways to examine the amount of slack in the economy by polling a panel of business leaders about their inflation expectations in the short and medium term. This monthly survey asks questions about year-ahead cost expectations and the factors influencing price changes, such as profit, sales levels, etc. The survey is unique in that it goes straight to businesses - the price setters - rather than to consumers or households, to understand their expectations of the price level changes. One major advantage of BIES is that one can get a probabilistic assessment of inflation expectations and thus get a measure of uncertainty. It also provides an indirect assessment of overall demand condition of the economy. Results of this Survey are, therefore, useful in understanding the inflation expectations of businesses and complement other macro data required for policy making. With this objective, the BIES is conducted monthly at the Misra Centre for Financial Markets and Economy, IIMA. A copy of the questionnaire is annexed.

Companies are selected primarily from the manufacturing sector. Starting in May 2017, the "BIES – August 2026" is the 112th round of the Survey. These results are based on the responses of around 1100 companies.

- The businesses in August 2026 expect one year ahead CPI headline inflation to be at 4.63%, marginally up by 7 basis points, from 4.56% reported in June 2026 (Chart 2). However, firms' uncertainty of CPI inflation expectations has remained elevated at over 1.0% during February 2026 to August 2026 period.

Chart 2: Expected CPI headline inflation (%) - one year ahead

B. Costs

- The cost perceptions data in August 2026 again indicates a mixed signal. The percentage of firms perceiving significant cost increase (in the range of 6% to 10%) has increased from 23% to 25% (modal value). However, the percentage of firms perceiving very significant cost increase (more than 10%) has declined from 21% to 16%.
- At the same time, the percentage of firms perceiving costs 'up moderately' (over 3% but below 6%) in this round has declined to 22%, from 26% reported in the earlier round (Chart 3).

Chart 3: How do current costs per unit compare with this time last year? – % responses

C. Sales Levels

- Firms' sales expectations rose further in August 2026, marking 3 consecutive months of improvement.
- Over 53% of firms in August 2026 are reporting 'about normal'² and greater sales, further up from 50% reported in July 2026 (Chart 4).

Chart 4: Sales Levels - % response

D. Profit Margins

- Profit margin expectations have improved over the past three months.
- The percentage of firms reporting 'somewhat less than normal' or below profit margin expectations has further declined to 68% in August 2026, from 78% reported in May 2026 (Chart 5).

Chart 5: Profit Margins - % response

² "Normal" means as compared to the average level obtained in the preceding 3 years.

Business Inflation Expectation Survey (BIES) – Questionnaire

A. Current Business Conditions

Q1. How do your current **PROFIT MARGINS**[@] compare with "normal"* times?

- ☐ Much less than normal
- ☐ Somewhat less than normal
- ☐ About normal
- ☐ Somewhat greater than normal
- ☐ Much greater than normal

Q2. How do your current sales levels compare with **SALES LEVELS**[@] during what you consider to be "normal"* times?

- ☐ Much less than normal
- ☐ Somewhat less than normal
- ☐ About normal
- ☐ somewhat greater than normal
- ☐ Much greater than normal

[@] of the main or most important product in terms of sales.

*"normal" means the average level obtained during the corresponding time point of preceding 3 years, excluding the Covid-19 period.

B. Current Costs Per Unit[^]

Q3. Looking back, how do your current **COSTS PER UNIT**[^] compare with this time last year?

- ☐ Down (< -1%)
- ☐ About unchanged (-1% to 1%)
- ☐ Up somewhat (1.1% to 3%)
- ☐ Up moderately (3.1% to 6%)
- ☐ Up significantly (6.1% to 10%)
- ☐ Up very significantly (> 10%)
- ☐

[^] of the main or most important product in terms of sales.

C. Forward Looking Costs Per Unit^{\$}

Q4. Projecting ahead, to the best of your ability, please assign a percent likelihood (probability) to the following changes to costs per unit^{\$} over the next 12 months.

- ☐ Unit costs down (less than -1%)
- ☐ Unit costs about unchanged (-1% to 1%)
- ☐ Unit costs up somewhat (1.1% to 3%)
- ☐ Unit costs up moderately (3.1% to 6%)
- ☐ Unit costs up significantly (6.1% to 10%)
- ☐ Unit costs up very significantly (>10%)

%
